

I have started my career as a java developer in 2002. Since then i have worked across **Domains** running from ERP to CRM , Banking to Finance , Project Management to Healthcare and Travel to Gaming

While working across the **Java Technology Stack** i have designed and developed applications using various Spring Boot Modules and also frontend JS frameworks like Angular and React.

I have worked closely with the product owners and business analysts to get the requirements right and with the architects to implement the **Non Functional Requirements** like security , scalability , reliability etc

I have also worked with the **Devops** engineers to set up the **CI/CD** pipeline for our projects using tools like Maven, Docker, Jenkins and Kubernetes.

I have also worked with various AWS Components such as EC2 , S3 , EKS, ELB, EBS, SNS, Cloudwatch to deploy our apps to the cloud.

I have participated in several **Agile** conferences and played a key role in implementing scrum and other agile practices like TDD, Pair Programming etc

I am a **Continuous Learner** and i have recently learnt creating serverless projects using AWS Lambdas

I also **Like Sharing** what i learn and i do it through my youtube channel and blog
